

BACKUP SERVICES: TAPELESS REPLICATION

RagingWire customers can take advantage of an easy-to-implement, high-capacity, intelligent tapeless backup product in Sacramento and Ashburn. No longer will you need to buy, rotate, or store tapes offsite. RagingWire's backup service, powered by Symantec's **NetBackup**, is completely managed and monitored by our expert IT engineers and NOC technicians. Quickly restore from a backup with a single phone call or email to our NOC support staff. This tapeless backup solution also satisfies your off-site disaster recovery replication requirements with no additional equipment required. Let RagingWire manage your backup environment in the data center while you focus on optimizing your IT environment.

RagingWire Backup Services: Fully Managed – Easy Restoration

Cost Effective

Pay only for the data you backup, on a per terabyte basis, with two price points: onsite only or onsite plus offsite replication.

Fully Managed

RagingWire manages and maintains the licensing and setup of the solution. Our 24x7 NOC is available any time to ensure you'll have access to the data you need.

Highly Scalable Capacity

We maintain plenty of capacity for you to grow – you only pay for what you use.

Intelligent Software

Your data is deduped, so we don't back it up a second time unless it changes, which shortens your total backup time.

Optional Offsite Replication

Colocate your IT systems in one RagingWire data center and replicate to our other facility across the country – offsite DR is really that easy.

Stop Managing Tapes

RagingWire's backup solution is tapeless, so you can forget about tape rotations in your colo cage or cabinet – it's all automatic.

Easy Restoration

Simply call or email our NOC support staff to create a ticket and leave the rest to us.

Integrated Solution

It's easy to add backup services to your RagingWire colocation solution, including off-site (Sacramento or Ashburn) replication.

TECHNICAL SPECIFICATIONS

- Tapeless solution for onsite backup or offsite DR replication
- VMware and Hyper-V virtualization support
- Backup data is deduped for efficiency and cost savings. Dedupe can be performed on your server or on the RagingWire backup device. We will work with you to determine the best option
- Supports the following databases and applications plus many more: IBM DB2, Informix, Lotus Notes and Domino Server, Microsoft Active Directory, Microsoft Exchange Server, Microsoft SharePoint Portal Server and Microsoft Office SharePoint Server, Microsoft SQL Server, MySQL, Oracle, SAP, Sybase, and Symantec Enterprise Vault

About RagingWire

RagingWire designs, builds, and operates mission-critical, high-availability data centers. With over 650,000 square feet of critical data center infrastructure at its campuses in Northern California and Ashburn, Virginia, the company is recognized as an industry leader and innovator. Our patented power management systems and fault tolerant cooling plant lead the data center market in reliability. RagingWire is unique in the industry in that we deliver a 100% availability service level agreement (SLA) even during maintenance windows. With highly customizable and flexible colocation solutions for both retail and wholesale buyers, a carrier neutral telecommunications philosophy, and unmatched reliability, RagingWire meets the needs of high power density, data intensive, and network-centric enterprises.
